

Project Demo Planning

Date	06 July 2026
Team ID	Not applicable / not assigned
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Introduce the project goal: predicting whether a credit card applicant is a Good or Bad Customer, and why automating this screening step is useful for lenders	1	Joyal Kumar
2	Data & Feature Engineering Walkthrough	Show how application_record.csv and credit_record.csv are merged, missing values handled, and the Good/Bad target label derived from credit history	2	Keerthi
3	Model Training & Comparison	Walk through main.py: training Logistic Regression, Decision Tree, and Random Forest, and comparing Accuracy/F1-score/confusion matrix across the three	2	Yasaswini
4	Model Selection & Persistence	Explain why Random Forest was chosen as the best-performing model and how it is serialized to model.pkl for reuse by the web app	1	Nasir
5	Live Web App Demonstration	Run the Flask app, fill in a sample applicant's details in the form, submit, and show the real-time Good Customer / Bad Customer prediction on the result page	3	Harika
6	Limitations, Future Scope & Q&A	Summarize current limitations (e.g. pending Render deployment, no requirements.txt/README yet), planned improvements, and open the floor for evaluator questions	2	Joyal Kumar

Total planned demo duration: approximately 11 minutes.

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Frame the credit-risk screening problem and why an ML-based first pass helps lenders
2	Solution Overview	High-level walkthrough of the pipeline: data merge -> feature engineering -> model comparison -> Random Forest -> Flask web app
3	Live Feature Demonstration	Submit a sample applicant through the web form and show the instant Good/Bad Customer prediction; optionally show a second example with different inputs
4	Q&A Session	Address evaluator questions on model choice, evaluation metrics, and known limitations (e.g. pending deployment)
